

prmTransformationBase

```
classDiagram
    class prmTransformationBase
    class prmTransformationDynamic
    class prmTransformationFixed
    prmTransformationDynamic --|> prmTransformationBase
    prmTransformationFixed --|> prmTransformationBase
```

The diagram illustrates a class hierarchy. At the top is the 'prmTransformationBase' class. Below it are two subclasses: 'prmTransformationDynamic' on the left and 'prmTransformationFixed' on the right. A horizontal line connects the two subclasses, with a vertical arrow pointing upwards from the center of this line to the 'prmTransformationBase' class, indicating that both subclasses inherit from the base class.
